Sr. No	B. Design (Bachelor of Design) Program Outcome
1.	Foundation in Design Principles: - Students will have a solid understanding of basic design principles, elements, and theories. They will be able to apply these fundamentals to create visually appealing and functional designs.
2.	Creative Problem-Solving: - Students will be capable of identifying design problems and generating creative solutions. They will be trained to think critically and approach design challenges with innovative ideas.
3.	Technical Skills: - Students will be proficient in using various design tools and software. They will have practical skills in drawing, sketching, modeling, and digital design techniques.
4.	Understanding of User-Centered Design: - Students will focus on user experience and usability in their designs. They will be able to conduct user research and apply findings to create designs that meet user needs and preferences.
5.	Project Management: - Students will have the ability to plan, execute, and manage design projects. They will understand the importance of timelines, budgeting, and resource allocation in the design process.
6.	Sustainability Awareness: - Students will be aware of sustainable design practices and the environmental impact of their work. They will be encouraged to use eco-friendly materials and processes in their design projects.
7.	Visual Communication: - Students will be skilled in visual communication, understanding how to convey messages and ideas effectively through design. They will be able to use typography, color theory, and layout techniques to create compelling visuals.
8.	Cultural Sensitivity: - Students will be sensitive to cultural diversity and understand the role of culture in design. They will be able to create designs that respect and reflect cultural values and identities.
9.	Professional Development: - Students will be prepared for careers in the design industry, understanding professional practices, ethics, and business aspects of design. They will be equipped with skills to work as freelancers, in design firms, or start their own design businesses.

Sr. No	M. Design (Master of Design) Program Outcome
1.	. Advanced Design Skills: - Students will demonstrate an advanced understanding of design principles, processes, and techniques across various disciplines. They will be able to conceptualize and create innovative design solutions that address complex problems.
2.	Research and Analysis: - Students will be skilled in conducting thorough research, utilizing both qualitative and quantitative methods to analyze design problems. They will be able to critically evaluate existing designs and propose improvements or new concepts based on empirical evidence.
3.	. Interdisciplinary Approach: - Students will possess the ability to integrate knowledge from different fields such as technology, business, and social sciences into their design practice. They will understand the importance of a holistic approach to design, considering various factors including user experience, market trends, and sustainability.
4.	Innovation and Creativity: - Students will be able to generate original and creative ideas, applying innovative thinking to design challenges. They will be adept at using both traditional and digital tools to develop prototypes and final products.
5.	Professional Practice and Ethics: - Students will understand the ethical implications of design decisions and demonstrate professionalism in their practice. They will be aware of intellectual property rights, sustainable practices, and cultural sensitivities in the design industry.
6.	Communication and Presentation: - Students will be able to effectively communicate their ideas, concepts, and research findings through various mediums, including verbal, written, and visual presentations. They will be able to engage and persuade different stakeholders, including clients, peers, and the public.
7.	. Leadership and Collaboration: - Students will develop leadership skills and the ability to work collaboratively in multidisciplinary teams. They will be capable of managing design projects, leading teams, and making strategic decisions to achieve project goals.
8.	Technological Proficiency: - Students will be proficient in the latest design software and tools, understanding their application in creating digital and physical designs. They will be able to adapt to emerging technologies and trends in the design industry.

Sr. No	B.Sc. Home Science in Fashion Design Program Outcome
1.	Knowledge of Fashion Design: - Students will have a comprehensive understanding of fashion design concepts, including clothing construction, textile science, fashion illustration, and design principles. They will be able to apply this knowledge to create fashion products.
2.	Textile and Material Understanding: - Students will be knowledgeable about different types of textiles, fabrics, and materials. They will understand their properties, uses, and how to manipulate them for fashion design purposes.
3.	Garment Construction Skills: - Students will be skilled in garment construction techniques, including pattern making, cutting, stitching, and finishing. They will be able to create well-fitted and aesthetically pleasing garments.
4.	Fashion Illustration and CAD Skills: - Students will be proficient in fashion illustration, using both manual and computer-aided design (CAD) tools. They will be able to create accurate and detailed fashion sketches and technical drawings.
5.	Trend Analysis and Forecasting: - Students will be able to analyze fashion trends and predict future styles. They will understand the role of fashion forecasting in the industry and how to use trend reports to inform their design choices.
6.	Marketing and Merchandising: - Students will have knowledge of fashion marketing, branding, and merchandising. They will understand consumer behavior, market segmentation, and how to promote and sell fashion products.
7.	Sustainability in Fashion: - Students will be aware of sustainable fashion practices, including the use of eco-friendly materials, ethical sourcing, and waste reduction. They will be encouraged to incorporate sustainability into their designs.
8.	Cultural and Historical Context: - Students will have an understanding of the cultural and historical influences on fashion. They will be able to draw inspiration from different cultures and historical periods to create unique and relevant designs.
9.	Portfolio Development: - Students will develop a professional portfolio showcasing their design skills and creativity. They will be able to present their work effectively to potential employers or clients.
10.	Industry Readiness: - Students will be prepared to enter the fashion industry, equipped with the skills and knowledge required for various roles, including fashion designer, stylist, merchandiser, and entrepreneur.

Date:

Sr. No	B.Sc. (Bachelor of Science) Program Outcome
1.	Scientific Knowledge and Understanding: - Students will have a strong foundation in scientific principles, theories, and methodologies. They will be knowledgeable in their chosen field of science, whether it be biology, chemistry, physics, mathematics, or any other specialization.
2.	Practical and Laboratory Skills: - Students will be proficient in laboratory techniques, data collection, and experimental procedures. They will be able to conduct experiments, analyze results, and draw valid conclusions.
3.	Critical Thinking and Problem-Solving: - Students will develop critical thinking skills, enabling them to analyze complex problems, evaluate evidence, and make informed decisions. They will be able to approach scientific challenges with logical reasoning.
4.	Research and Inquiry: - Students will be capable of conducting scientific research, including literature review, hypothesis formulation, experimentation, and data analysis. They will be able to contribute to scientific knowledge through research.
5.	Quantitative Skills: - Students will be skilled in using mathematical and statistical tools to analyze data. They will be able to apply quantitative methods to solve scientific problems and interpret scientific results.
6.	Communication of Scientific Ideas: - Students will be able to communicate scientific concepts and findings effectively, both in written and oral forms. They will be able to write scientific reports, present research findings, and explain scientific ideas to both specialized and general audiences.
7.	Interdisciplinary Collaboration: - Students will understand the importance of interdisciplinary approaches to solving scientific problems. They will be able to collaborate with professionals from different scientific disciplines and integrate knowledge from various fields.
8.	Ethics in Science: - Students will be aware of ethical issues in scientific research and practice. They will be committed to conducting research with integrity, honesty, and respect for ethical standards.
9.	Lifelong Learning and Adaptability: - Students will be motivated to engage in lifelong learning and stay updated with advancements in science and technology. They will be able to adapt to new scientific challenges and continue to grow in their chosen field.
